

Conditional branching: if, '?'

01 May 2026 20:47

Sometimes we need to perform different actions based on different conditions. To do that we can use the `if` statement and the conditional operator `'?'` That's also called a question mark, operator.

The 'if' statement

The `if(...)` statement evaluates a condition in parentheses and, if the result is true, executes a block of code.

For example:

How to take data input in NodeJS?

1. `npm install prompt-sync [install-prompt sync]`
2. Go to the code editor:

```
const prompt = require('prompt-sync')();  
//data input using prompt()  
let year = prompt('Enter year: ');  
console.log(`Year: ${year}`);
```

← Compulsory in every program, where you are taking data input from the user.

```
const prompt = require('prompt-sync')();  
let year = prompt('Enter year: ');  
console.log(`Year: ${year}`);  
console.log(typeof(year));  
let y = Number(year);  
if (y % 400 == 0 || (y % 100 != 0 && y % 4 == 0)) {  
    console.log(`${y} is a leap year`);  
}  
else {  
    console.log(`${y} is not a leap year`);  
}
```

Century year
→ { 1900 ← Not leap year
2000 ←
2100 ←
